## MUSCLE MACHINE OF THE YEAR (FINALIST)

In May of 2005 Scott and Laura Taylor purchased this 1968 "A"-code Mustang Fastback with the intention of building an Eleanor replica that they could drive and take to local shows and began looking around for a nice '67 or '68 fastback that would suit their needs. They finally located a car in Southern California that was being driven by an 18 year-old high school senior that was reluctantly selling the car to support his future college education.

Luckily the mid-west car had been rust proofed and was in solid shape, so the Taylors contacted Henry's Hot Rods in Sacramento to begin the build. As you can see, the end result was far from the expected Eleanor replica they set out to create.

The over-the-top show car features an aluminum 427 dyno'd at 705 horsepower (without the 200hp NOS engaged), Art Morrison Max-G frame, Air Ride suspension, BFGoodrich tires and one of the nicest PPG paint jobs you'll see.

## NEED ZINC?

### Hy-Per Lube Zinc Replacement Additive.

In an effort to extend catalytic converter life, motor oil companies have reduced the levels of ZDDP (zinc dialkylidithiophosphate) in their oil. This reduced ZDDP approach leaves many older and high performance engines without the proper EP (extreme pressure) wear protection. **All non-roller cam designed engines are at risk for significant wear problems.**

Hy-Per Lube's exclusive formula, when added to any motor oil, provides up to twice the EP wear protection as high content ZDDP motor oils and is safe for catalytic converters.

**Hy-Per Lube Zinc Replacement Additive provides complete wear protection for flat tappet cam design engines.**

Available at:  
Checker, Schucks & Kragen Auto, O'Reilly Auto Parts, Pep Boys & PartSource (Canada)

## Performachrome™

World's brightest ceramic header coating

You've never seen a ceramic coating like it!

### Only from Performance Coatings

A ceramic process so close to chrome you'll have to look twice. Never turns yellow like stainless and won't "blue" like chrome. Can be re-polished anytime to keep it looking new. Others claim to be the brightest, but the amazing reflective quality of Performachrome™ will exceed anything you've seen.
